## WHY PODIATRY

## PODIATRISTS ARE PHYSICIANS, SURGEONS, AND SPECIALISTS:

- Treat a wide range of patients and conditions within a variety of practice settings.
- Treat patients from diagnosis, through conservative care, surgery, and recovery, while developing meaningful patient relationships.
- Earn a salary comparable with other physician specialties, while working an average of 40–60 hours a week and maintaining work-life balance.
- Work in a number of subspecialties including diabetic wound care, surgery, sports medicine, dermatology, pediatrics, and more.
- Receive training comparable to other medical specialties through a highly specialized and straightforward
  pathway by attending four years of podiatric medical school, followed by a three-year, hospital-based
  residency.
- 99% of podiatric medical students are placed into a podiatric residency program after completing their degree.

EDUCATION AND TRAINING: A COMPARISON	DPM	MD & DO
Bachelor's Degree, MCAT, and other pre-med requirements (shadowing, interning, etc)	4+ Years	4+ Years
Attend Medical School	-	4 Years
Attend Podiatric Medical School	4 Years	-
Residency Training	3 Years	3-7 Years
Fellowship Training	Optional - varies in length	Optional - varies in length
Obtain License	Scope varies depending on state in which you practice	Scope varies depending on the specialty within the state in which you practice
Continuing Medical Education to Maintain License	Ongoing	Ongoing

FPMA Young Physicians share why they chose Podiatry

**Alyson Slater, DPM** 

Podiatric Medicine is one of the most well-rounded professions in all of healthcare. I knew it was the best field for me because it gave me the opportunity to incorporate all of my medical interests into one area of practice. I am continuously humbled by the privilege of being able to perform surgeries that help patients to live better lives. We have such a diverse profession! Some patients will leave the office pain free, while others will require months of long term planning to reach their goals. We have the best of it all- we are constantly faced with both challenges and rewards that keep each day exciting. I am very grateful to be a practicing Podiatrist.

Nishu Vora, DPM

Podiatry is a unique specialty of medicine, as we are able to treat almost any pathology in the foot and ankle. Be the type of podiatric physician you want to be! You can be a clinician, orthopedic surgeon, dermatologist, pediatrician, plastic surgeon, reconstructive surgeon, or sports medicine doctor. Many podiatrists take the path of doing everything, while others take a more specialized path. The path to becoming a doctor of podiatric medicine is a very rewarding one.

Katie Ferraro, DPM

## FLORIDA PODIATRIC MEDICAL ASSOCIATION

Matthew Miller, DPM

I grew up with an interest in helping people and learning. With a family full of health-care practitioners, being in the health field seemed like a perfect fit. During junior year of college, I decided to participate in as many clubs/organizations and new hobbies as I could fit into my schedule, and one of them was a half-marathon training club. I joined because I wanted a challenge, but little did I know at the time it would direct me toward a new career option. A few of my friends in this club sustained running-related injuries, and I was always fascinated by the biomechanics and the treatment options recommended by podiatrists. I researched podiatry and learned about all of the perks and the variety of options within the field and decided it was definitely the field for me.

A podiatrist gave the commencement speech at my college. I was a runner in high school and met an amazing podiatrist who loved what he did every single day (in my hometown, of all places). There are countless reasons to enter the field of podiatry. It allows me the freedom to live my life on my terms.
